Confidence consolidates at a low level

- ANZ-Roy Morgan Australian Consumer Confidence gained 0.7% last week after losing 3.5% in the previous reading. Strength was relatively broadly based across the subindices, although the "time to buy a household item" index dropped a sharp 3.8% and is now at its lowest level in ten years.
- Current financial conditions gained 1.9% and remain above the long run average, while future financial conditions gained 1.6%.
- The economic conditions subindices also rose, with current economic conditions up 3.6% and future economic conditions up 1.0%. Both economic subindices remain well below their long run averages.
- The four week moving average for inflation expectations remained stable at 4.1%.

ANZ-Roy Morgan Consumer Confidence and inflation expectations

Last week (21-22 Sep)	Weekly change, %	Four-week average	Monthly average since 1990	Inflation expectations (4-week ma)
110.1	0.7%	111.8	113.1	4.1%

Data collected last weekend (Saturday and Sunday), based on around 1,000 face-to-face interviews. Not seasonally adjusted. Further data history on page 6.

ANZ Senior Economist, Felicity Emmett, commented:

"The modest rise in confidence leaves it well below its long run average. The weakness in the time-to-buy-a-household-item index is particularly disappointing, given that tax cuts should be supporting this measure. Rising concerns over the impact of the stimulus, combined with the lift in the unemployment rate in August and ongoing global easing in monetary policy settings, suggest to us that the RBA will likely cut rates again in October. So far, though, consumers seem impervious to both fiscal and monetary stimulus, and the combination of weak wage growth and high levels of debt may prove to be the more dominant driver of confidence and spending."

Confidence up only modestly after the previous week's sharp fall
